

Zero Networks Breach Map

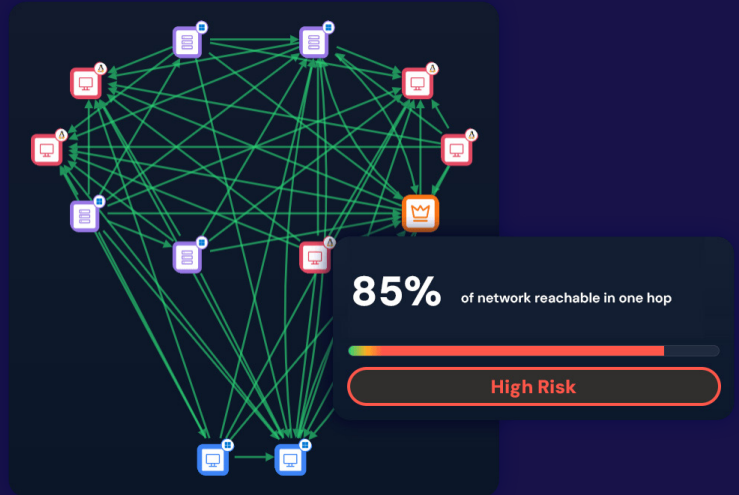

Visualize your internal network through an attacker's eyes

See exactly how far an attacker could move through your network today. Breach Map shows you your reachable assets, open lateral movement paths, and breach propagation risk – in minutes, for free.

What is Breach Map?

Breach Map is a free tool that visually maps your internal attack surface, showing how assets connect, where attackers could move, and what they could reach – before a breach occurs.

With the click of a button, find out how microsegmentation would reduce your exposure by toggling the “With Zero Networks” view.

Exposure Assessment

Uncover open lateral movement paths across your network – the route attackers would take if they got in today.

No Disruption

Breach Map is lightweight and non-invasive – no agents, no deployment, and no changes to the environment required.

Business Insights

The interactive visual output makes internal risk tangible – easy to share with business leaders and auditors.

HOW IT WORKS

Up and running in three simple steps.

1

Download to Tool

The lightweight Breach Map tool is non-disruptive – no agents or changes to the environment necessary.

2

Run the Scan

Breach Map scans your internal network in minutes, generating a visual map of your attack surface.

3

Get Your Report

The report surfaces total assets discovered, how many are reachable via lateral movement, average blast radius, attack surface, an overall breach propagation risk score, and more.
