### What do we mean by automated?

Zero's deterministic automation engine enables accurate tagging, grouping and policy creation/maintenance to simplify microsegmentation and enforce least privilege access across the network, without manual configuration or complex integrations.

## Taking the Target off FinServ's Back

# Zero Networks: Effortless Microsegmentation for Financial Institutions

In today's relentlessly targeted financial landscape, where cyberattacks are increasingly sophisticated and costly, Zero Networks offers a paradigm shift in network security. We understand the unique pressures you face: ever-changing regulatory compliance, essential protection of sensitive financial data, and the cruciality of business continuity. That's why we've engineered a microsegmentation solution that just works, delivering robust security without the traditional complexities and disruptions of legacy solutions.

## Key Benefits Tailored for Financial Services Organizations

By implementing Zero's automated microsegmentation capabilities, financial services organizations can strengthen their overall security posture, streamline compliance efforts, and protect valuable digital assets while adapting to evolving regulatory standards and technological landscapes.

### Immediate Protection Against Complex Threats

Legacy microsegmentation is notoriously complex, with lengthy deployments that are labor-intensive and still leave portions of your network unprotected. Zero Networks offers complete and immediate protection against advanced threats, including ransomware, with rapid deployment that minimizes your exposure window. Our automated approach simplifies implementation and management, securing every asset on-premises and in the cloud without costly agents or hardware upgrades.

### Instant Breach Containment – Block Lateral Movement and Thwart Ransomware

With Zero, threats are immediately contained within their microsegment. By preventing unauthorized lateral movement, you limit the blast radius of any attack and ensure the safety of every asset. This proactive approach thwarts ransomware and prevents attackers from moving deeper into your network to access sensitive data or disrupt critical operations.

## EVERCORE

“

Zero Networks is what I would call a cornerstone piece of security technology...

To be able to control lateral movement inside the enterprise with one platform, with one admin – who’s doing that role as a part-time role – is mind-boggling.

*Chris Turek, CIO of Evercore*

### Accelerated Regulatory Compliance: Build a Resilient Network Underpinned by Least Privilege Security Principles

Zero Networks enables financial services organizations to meet and exceed stringent regulatory requirements like NYDFS, PCI DSS, and others, by enabling powerful access controls and demonstrating segmentation across your entire network. These granular controls streamline audits and allow you to build a resilient network underpinned by least privilege security principles. By allowing you to demonstrate segmentation across your entire network and adhere to Zero Trust principles, Zero helps organizations boost audit scores, pass penetration tests in the shortest timeframe, and reduce cyber insurance premiums.

Regulations we help meet:

PCI DSS • SWIFT • GDPR • FFIEC • NYDFS • CCPA • SOX • FISMA

### Effortless Scalability and Flexibility

Zero Networks’ automated microsegmentation capabilities continuously adapt to network changes, ensuring your network stays secure as new assets are added – without manual intervention. When new assets are added, we automatically segment and protect them, dynamically adjusting security policies to maintain a consistent security posture across your entire environment, whether on-premises, in the cloud, or in hybrid environments.

## Take The Target Off Your Back – Get Zero

Don’t wait for the next breach to test your defenses. Zero Networks empowers financial services organizations to achieve true Zero Trust security in a matter of days, not years. Contact us today to learn how effortless microsegmentation can rapidly transform your security posture, reduce your risk, and ensure compliance, allowing you to focus on what matters most: serving your clients and growing your business. With Zero Networks, you’re not just buying a product; you’re investing in peace of mind.
