

EXECUTIVE OVERVIEW

Contain Cyberattacks **Before** They Disrupt the Business

AI is the new adversary. Zero contains it to keep your business running.

27 seconds to move from one compromised system to the next. \$15,000 for every minute the business is down. 241 days to identify and contain a breach. That is the new math of cyber risk.

AI broke the old security model by finding gaps faster, moving through trusted paths, and looking like normal business activity — such as a valid credential or normal connection. Resilience cannot depend on detecting every threat fast enough; it has to depend on containing them.

Zero contains cyberattacks before they disrupt the business, so one compromised laptop stays one compromised laptop. And your business keeps running.

Don't Try to Outrun AI – Contain It with Zero Networks

Zero Networks changes the game. Instead of trying to outrun the attacker, Zero automatically contains them by locking down movement between users, devices, servers, workloads and AI agents. This is microsegmentation built for the AI era: fast to deploy, simple to run and designed to stop attackers from turning one compromise into a business disruption.

That is how companies keep running through AI-speed attacks.

One breach can reach 85% of your network. Most networks were built to connect everything, not contain anything. One compromised host can reach up to 85% of internal systems, turning a local incident into a business-wide risk.

AI amplifies that exposure into a resilience problem. It helps attackers map the environment, test trusted paths, reuse credentials, and find the shortest route from one compromised machine to business disruption. For decades, security teams have tried to win the same race: detect faster, respond faster, and stop attacks before they spread. AI makes that race too fast to win.

“

“Zero Networks gives us confidence that if something gets in, it cannot move far enough to disrupt the business.”

– Fortune 500 Customer

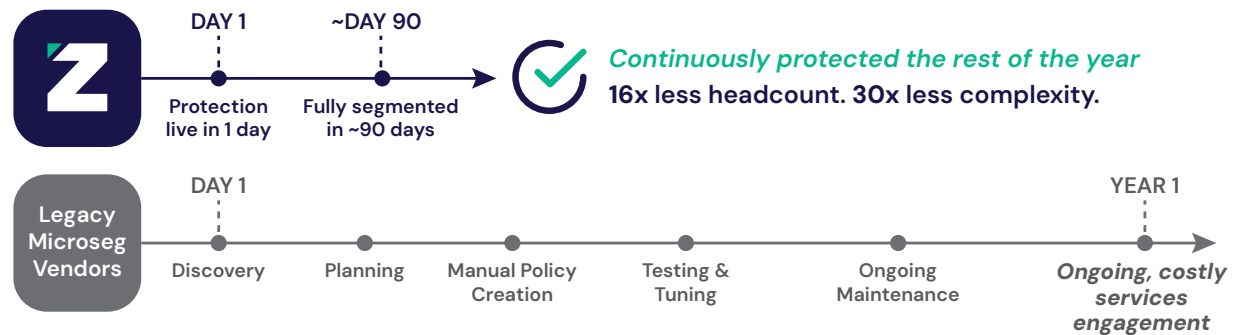

”

Deployed in 30 Days, Not 3 Years

Traditional microsegmentation was too slow, too costly, and too complicated. It took armies of consultants and years of work and budgets most companies could not justify.

Zero Networks changes the equation. We automate containment so companies move fast, run lean, reduce risk, and confidently operate as AI threats accelerate.

Countries

Trusted Where Downtime Isn't an Option

Mediterranean Shipping Company

One in five of the world's shipping containers moves through systems protected by Zero.

Novartis

Half the world's cancer prescriptions are manufactured and delivered via systems protected by Zero.

Zero Networks is the **only** microsegmentation vendor with a 5/5 Gartner Peer Insights rating and 100% willingness to recommend.

5/5 on Gartner Peer Insights

Attacks keep coming. Your business keeps running with Zero.
